

Vacuum SD 20

Compact high-performance industrial vacuum

As for fine and toxic dusts and solids such as cuttings, the SD 20 is the perfect option. It allows the combination with electric tools with high dust volume (E.g., grinding machines, CNC machines, etc.).

The two individually switchable 1150 Watt bypass suction motors (LAMB) ensure a strong suction power. Due to the powder-coated metal construction, the vacuum has a very robust body and dirt container.

The SD 20 got an extra-large cartridge filter with 3 m³ filter surface (dust class M) and excellent filtration properties. An excellent suction performance is guaranteed. The semi-automatic and very efficient filter cleaning also leads to long part lifetime.

The 20 l dust container can be lowered easily and is mobile.

Recommended applications:

- Construction / building cleaning
- workshops, also in connection with electrical machines for dust extraction
- Laboratories
- Food and pharmaceutical industry
- Wood industry

Technical data

SD 20

Power	2,3 kW
Depression	2500 mm H ₂ O
Airflow max.	360 m ³ / h
Filter surface	3 m ²
Type of main filter	Polyester/Antistatic
Dust class	(M)
Filter occupation	120 m ³ /m ² /h
Dust bin capacity	20 l
Suction inlet diameter	40/50 mm
Sound level	74 dB (A)
Voltage	230 V
Weight (empty)	31 kg
Dimensions (LxWxH)	500 x 480 x 1050 mm
